Sub No.	Submission Summary
1	Support the Amendment and Guidelines
1	Suggested changes:
	 Figure 7 Access and Movement: more bus stops in reality than shown and should be added to figure.
1	Route 109 tram should be shown in correct location to the east of the pedestrian crossing.
	 Figure 8: the street tree symbol only shows indicative tree numbers and should be labelled in legend.
	 Page 31: terms such as 'patische' and 'kitsch' needs to be replaced.
	 Page 43: suggested grammar and spelling changes, meaning of 'urban presence' needs to be clarified.
	Minimum height 4 storeys in all precincts
2	Need land on southern side of Box Hill for parklands
	Pedestrian experience around shopping centre disjointed
3	Support Built Form Precinct B in Structure Plan being included in Built Form Precinct D or F as Box Hill is growing
	Support the proposed amendment to include new building heights.
4	Proposed changes would help Box Hill become a vibrant, modern and prosperous city, encouraging business growth and employement
	Proposal consistent with encouraging increasing population density and improving supply of affordable housing
	Concern about aggressive development
5	Concern about infrastructure required for new development, including train and bus interchange and car parking
	Sub-precinct F2/F3: 2-3 storeys, F5: 8-10 storeys, F9: 2-3 storeys
	Support intent of proposal
	Insufficent recognition of origins of Box Hill as a small town
6	Roads are not wide enough, can create overshadowing and wind tunnel
0	Precinct C/F1 should be expanded further and take in all of Carrington Road, from Station Street to the roundabout, encompassing shopping centre and train station. The height limit should be
	Minimum car parking requrement must be reinstated to requirements before car parking overlay was implemented as using public transport is not realistic and could result in greater unemploye
7	Buildings should not be higher than 4-8 storeys
	Building towers is making traffic in side streets very heavy, traffic noise, pollution and car parking
	Think the Box Hill Mall is a Key Open Space, will there be controls to prevent overshadowing of the Mall?
	Is it possible to include street level setbacks at strategic locations along Station Street to allow for trees and seating
8	What can be done to minimise wind tunnel effects as seen by the ATO?
0	Walking and cycling needs to be encouraged and car travel minimised
	Can the guidelines provide for increased bike storage capacity?
	Set down spots are needed for car passengers
	Amendment appers to cater for at least one massive high rise building
	Hard to imagine planners are giving consideration to environmental matters
9	No building in Australia should be allowed unless it provides at least 25% of its land area to gardens that includes canopy trees
Ĭ	Infrastructure concerns including car parking and congestion
	Planners should be insisting that each apartment is allotted at least 2 car parks as using public transport is not attractive of viable
	Major concern is plan to rezone more areas for high rise
	All further buildings in Box Hill no more than 10 storeys for the following reasons:
	Buildings create wind tunnels
	Create areas of little to no sunlight
	Buildings only have 1 and 2 bedroom apartments which will not ease the housing crisis
10	People do not use, or want to use, public transport as it is dirty, unsafe and standing room only
	Not a sufficient amount of car spaces being provided
	Number of people will create traffic congestion
	Berlin has wide streets with 10 storey apartment blocks, why can't Box Hill be similar?
	Residents feel ignored, undervalued and shoved aside by Council
	Owner and occupier of 716 Station Street, Box Hill
11	Support proposed rezoning from RGZ to MUZ
	Suggest F2 include two further properties along Station Street to the laneway between 718 and 720 Station Street as the laneway is a natural dividing line
	Would alleviate confusion and inconsistency between the Guidelines that apply to a property zoned MUZ and those included in Precinct B of the Structure Plan
12	Director of company which owns 718 Station Street, Box Hill
12	Supports Submission 11

height limit should be 4 storeys, with increased setbacks
in greater unemployement

	Proposal for 20 storey buildings in F4 and 30 storey buildings in F5 will significantly impact the quality of life in area
13	Buildings will be visible from all parts of yards and significantly change the family character of the neighbourhood
15	Proposed heights inappropriate near heritage precinct
	More appropriate height limit for F4/F5 would be 8 storeys, like in F9
	Issue is speed of development, dramatic increse in population density and inadequate commitment to parallel development of infrastructure
	F1/F2/F3/F7/F8/F9: 8 storeys, F4:15-20 storeys, F5: 25 storeys, F6: 10 storeys
	Council should be insisting that Federal/State Governments commit to funding infrastructure before major changes to Planning Scheme are considered
	Council and government should negotiate with developments to form partnerships with community e.g provision of open space, adequate car parking, social housing etc
14	Infrastructure should include: major investment in Box Hill Transport hub, new schools/child care, social/affordable housing, new sporting/recreational facilities, examine parking flow/c
	services
	Proposed changes only talk about how high buildings can go, should also talk about the mix of development
	Not sure why changes are being pushed through when the rate of development occuring in Box Hill is not occuring in other MACs, can only think that other Councils are taking time to
	before approving changes to the planning scheme
	Object to 100% site coverage in F1, F2, F3, F4, F5 and F8. Ground level should be setback from the street frontage to allow for planting of canopy trees
	100% site coverage will result in the urban heat island effect
	Has consideration given to a wider footpath?
15	Green space is important to prevent flooding and there is no provision for new public open spaces
	Object to the bulk of the proposed height as Box Hill does not need extra large developments
	Is there any plan to upgrade the Box Hill interchange?
	F1/F3/F6/F7/F8: 8 storeys, F2: 12 storeys, F3: 8 storeys, F4: 12 storeys, F5: 20 storeys, F9: 5 storeys
	Regret that control of Building inspector functions rest with private sector, elected Government must now try to control via planning regulations
	Opportunity to showcase good modern urban planning, as private sector will not provide this
	Pedestrians should not be overwhelmed by building bulk, able to move through ground floors or buildings
	Higher buildings should be setback at upper levels
	Retain a sense of space and ability to see the sky and horizon
16	Higher buildings should provide open ground level areas
	Broader open space, such as Whitehorse Road, should be protected
	More shade trees, planting, seating and less intrusion of built form
	Pedestrian and road traffic should be separated over Whitehorse Road
	What regulations control Built Form Precinct A of the Structure Plan?
	Solar panels should be protected from shadows cast by taller new buildings
	F1/F9: 6 storeys, F2/F3/F4/F5/F6/F7: 10 storeys, F8: 8 storeys
	All towers above 4 storeys should be setback from the footpath to allow canopy trees to be planted, and reduce loss of greenery, wind tunnels impact
	Towers should not be allowed to have highly reflective cladding as it can reflect to other buildings and drivers/pedestrians
	Council needs to make car sharing schemes mandatory in apartment blocks
17	Apartments need to have minimum floor sizes eg. at least 50sqm for a 1 bedroom apartment
	Council should greatly increase the number of required car parking spaces unless it can successfully lobby for the duplication of the rail line from Box Hill to the city and a new tram line
	Possible that there will be a glut of apartment buildings
	Council needs to know, per storey, the additional number of people that it will bring to the resident or employee population in Box Hill and what proportion each storey will need in the p
	public transport, libraries, health, schools etc, If this cant be provided now or when the building process is finished then council needs to restrict development
	Object to current planning standards, height limits of 30 storeys or more is unneccessary
18	Work in Box Hill and walk amongst litter, dumped trolleys, hard waste rubbish in front of apartment blocks, which is only going to get worse.
	Not enough all day parking and public transport is not convenient or suitable for all
	Concern that number and size of buildings proposed and general height limits are creating a satellite CBD and apartment residential area in Box Hill
	Road and transport infrastructure is unlikely to withstand rapid increase in population and are already congested
	No obvious planning for longer term capacity of vital infrastructure such as signalling capacity of train system, capacity of trains, additional tracks etc
	Accidents will occur where there is congestion on the track
19	Developers are not contributing significantly to the real cost of bulding the neccessary support infrastructure
-	What is being done to cater for primary and high schools in the area?
	For each precinct, what is the impact on the infrastructure of increase in density, and what advance action has been taken to absorb the growth?
	What steps is Council taking to protect the neighbourhood character of surrounding suburbs from the expansion of Box Hill?
	Dark lines on the proposal showing Precinct A and Precinct B of the Structure Plan suggest that expansion is forseen and inevitable and inevitable creep will occur
<u> </u>	

/congestion/car parking overlay, health/community

to ensure the accompanying infrastructure is in place

line along Canterbury Road

e provision of green space, waste disposal, use of

	Disappointed and dismayed with the current massive development of highrise towers in Box Hill
	If new heights are adopted it will only further destroy the character of the city and will become a concrete and glass jungle
20	Box Hill is already crowded and unable to cope with the additional population
	Roads are choked with cars and trucks and public transport cannot cope
	Access to the railway station is inadequate
	Quality of shopping centrea has declined with the loss of major stores and retailers
	Heritage and character of Box Hill should be protected
	Heights of 20 and 30 storeys should be reduced to 15 and 20 storeys
	Fail to see:
	how creating further CBD type neighbourhoods on top of an existing city will improve the quality of life for original inhabitants
	why anyone would want Melbourne to grow to 8 million people when the rest of the state is empty
	how it is in the national interest to have Melbourne grow to 8 million people
	why it is in the national interest to be following United Nations visions of 20 minute neighbourhoods as we are not China or India
	why we do not develop a number of rural centres such as Ballarat, Bendigo and Geelong with high speed rail
21	Australia and Victoria are empty, yet considering 30 storey buildings with no setbacks and no landscaping
21	We are not Singapore, Hong Kong, India, China or Soviet Union - it would not happen in Toorak, Brighton, Middle Park, St Kilda Road where they have taxi pick up facilities, fountains, landscapin
	F1: 8 storeys, F2/F4: 12-15 storeys, F3: 10-12 storeys F5: 20 storeys, F6: 15 storeys but 4 storeys on Thames Street and facing Box Hill Gardens, F7: 12 storeys but 6 storeys on Elgar Road and
	6 storeys on Irving Avenue, F9: 12 storeys but 6 storeys when abutting Kingsley Park
	Quality of buildings is very important to consider - most important aspect is whether new flats are owner/occupied or rented
	How much space will medical/education interests take up?
	Are government agencies planning to move to Box Hill?
	Need effective representation continually in Box Hill
	In F3, Watts Street should not be grouped in with Rutland Road and Carrington Road as Watts Street is primarily established residential areas
	Do not believe that the proposed height limit of 10-12 storeys is suitable for Watts Street, should not exceed 3-5 storeys
22	Any future development of the Watts Street car park should be mindful of the existing residential character
	F2 should be 8-10 storeys to prevent overshadowing
	Council needs to consider the negative impacts of the proposed changes on car parking within Box Hill
	Support the prompt adoption of Amendment C175 as concerned at the lack of controls over high rise development in Box Hill
23	10 storeys, with setbacks, is appropriate for Station Street
	F3 should be no more than 5 storeys
	Other concerns include visual blight, overshadowing, potential wind tunnels, lack of social housing, lack of infrastructure, removal of tree cover, lack of amenity and disruption
	Too many high rises in Box Hill, have residents been asked?
	Prefer a suburban area
24	Local infrastructure not set up to cope with proposed population density causes by high rises
	Do not want approal of anything more than a few storeys high
	Want an investigation into who approved the current high rises and how they demonstrated this is what residents want
	Want better infrastructure to mitigate risk of traffic congestion
	Do not recall any consultation about high rise buildings such as ATO and twin towers on Whitehorse Road, and further towers have been approved without regard for ratepayers views
	New towers intrude into homes and visible like next door
0.5	Current proposal to set height limits and design guidelines are so inappropriate and will destroy amenity for the area
25	Proposed height limits should be halved and generous setbacks and landscaping requirements should be mandated
	Bureacratic letter sent to residents only include a poor quality, black and white map with no explanation about what is being proposed
	Many loyal ratepayers are elderly and a referendum on greedy pro-growth policy would be a better way to gauge community views
	No consideration or provision has been given to problems of increased pedestrian and vehicle traffic

facilities, fountains, landscaping and setbacks ut 6 storeys on Elgar Road and Thames Street, F8: 12-15 storeys but
disruption
or ratepayers views

26	Disappointed in belated attempts to confront planning issues of pre-eminent MAC Impact of this proposed development will detrimentally impact on quality of life Assumption that bulk of MAC residents place little value on matters such as trees, gardens, nature strips, amenity Decision making of councillors could be distorted, Elgar Ward Councillors became ambivalent about development proposals whereas other Ward Councillors content to support accelerated growth in Box Hill to ensure it doesnt occur in their Wards No evidence in Guidelines about present vehicle movement in and around the MAC No attempt to assess how many vehicles will more into and out of the MAC No attempt to assess how many vehicles will more into and out of the MAC No attempt to assess how many pedestrians will need to be catered for No provision for safe bicycle paths and adequate bicycle storage No consideration for probable need for shuttle bus service MAC is not an attractive place and will get uglier as setbacks are reduced Green spaces in the centre and south of the MAC should be created by using contributions from developers Council is naively allowing developers to set their own height limits All decisions suggest the possibility of corruption in the planning process Suggest height limits be halved unless, or until the issues of accessibility and transport and properly resolved
27	Rising towers look like they are almost in the backyard of a neighbour, visually offensive Hot days the metallic cladding reflects heat and sunlight Local developers like to remove trees, skian buyers like to remove trees Council is allowing Box Hill to become a dumping ground for unwelcome, high concentrations of people None of the other MACs has allowed the same pace and scale of development Governments need to cut immigration or develop a decentralisation policy to move people to regional areas Assume Council is greedy and/or corrupt Why doesn't Council hold a referundum about these ultra-growth proposals? Author of letter to resident sabout Amemdent is incompetent or intending to undertake a fake consultation Consultation process was resident unfriendly Huge, ugly towers will inevitably create traffic chaos, no provision for widening roads and setbacks removed No provision for bike paths and pedestrian traffic appallingly congested This is not Hong Kong, Asian developers and Councillors want to make it like Hong Kong Developers should be required to contribute significantly to the cost of infrastructure Propose a complete ban on any new approvals of towers more than 10 storeys high Built Form Precinct A in the Structure Plan should be only 2 storeys. Precinct B and D should be only 2 storeys, setback requirements should not be reduced F1: 5 storeys, F2: 4 storeys, F3: 3 storeys, F4: 4 storeys west of Nelson Road, 20 storeys east of Nelson Road, F7: 3 storeys, F8: 5 storeys but 2 storeys along Irving Avenue, F9: 4 storeys but 2 storeys abutting residential areas Towers are monuments to rampant self deluxion and greed Council should immediated undertake consultancy to identify what tree plantings and tree protection are required in neighbouring areas to screen the stark ugliness that has been foistered upon the neighbourhood No thought has been given to climate change and the need for more trees
28	Agree that there should be maximum building heights in Precinct F F5: 20 storeys Infrastructure needs to be sufficiently wide enough to carry additional traffic Must be sufficient parking for residents of new towers Must be better and more frequent public transport Height restrictions and size of buildings should not be altered in other Built Form precincts
29	Submission for 1011-1023 Whitehorse Road, Box Hill Supportive of Council seeking to implement more tailored planning controls but strongly oppose the Amendment as it relates to the site at 1011-1023 Whitehorse Road Amendment fails to recognise the site's contextual and strategic opportunities as the site is located in Activity Precinct F and Built Form Precinct B in the Structure Plan Requests that the property and land located on the northern side of Whitehorse Road be included in Built Form Precinct F because of the sites size, curent zoning of C1Z, location on Whitehorse Road, adjoining planning permits Request that the propert and land also be included within Activity Precinct A of the Structure Plan and within Precinct F3 in the Guidelines and DDO6 The requested changes will provide an approriate strategic and statutory document that allows the future development potential of the site and land to the immediate east and west to be achieved

	Submission for 16-28 Nelson Road, Box Hill
	Generally supportive of Council's amendment, in particular the proposed rezoning of the site to MUZ
	Opposes the introduction of the DDO as it is inappropriate for the site and should be varied to better suit the site context
	Proposed setback is completely different in the Guidelines to those that currently exist in the Planning Scheme
	The Structure Plan states avoide front and side setbacks however the Guidelines request an 8m setback
	Guidelines do not recognise legacy situations where incremental changes are made to existing facilities
	Proposed setback requirements do not reflect the prevailing circumstances
	Given the disparity, there is a reasonable case to include the east side of Nelson Road in a different Precinct or Sub-Precinct to recognise the particular issues
	Believe the height limit of 15 storeys is unreasonably restrictive given the height of the approved adjacent development
	Seeks change to the front setback provisions (adopt a zero front setback)
	Seek a change to the preferred height limit to 20 storeys
	Believe the number and height of buildings proposed is accessive
	What are the plans for infrastructure
	Transport and parking is already a problem
	F1/F2/F3: 6 storeys, F6: 15 storeys, F7/F8/F9: 4 storeys
	Concerned that the Structure Plan boundary will be expanded into residential areas.
	Do not agree to the heights
	What proof is there that these will be lived in, or sold to international buyers?
	When is Council going to have meetings with residents?
	Object to the proposed amendment because of overshadowing due to the change of heights, increased stress on narrow streets, increased congestion and increased strain on infrastructure
	Recommend that Built Form Precinct F in the Structure Plan be reduced to Precinct D for the area west of Elgar Road
	F1/F2/F3/F6/F7/F8/F9: 3 storeys, F4: 4 storeys, F5: 5 storeys
	Do not wish to live in a city, do not want to see a satellite city
	Box Hill and surrounds are already too congested and it is difficult to find a carpark Insufficient infrastructure to support the proposed increases in housing density
	Should include much lower height limits - F1/F2/F3/F4: 8 storeys, F9: 4 storeys, F5/F6/F7: 8 storeys
	Separate western part of F6 should be included in F7 precincts
	Consultation process has been inadequate
	No details were provided in the mailout about the proposed height limits No towers should be allowed west of Elgar Road
	8 storeys too high for Kingsley Gardens
	Object to the massive heights proposed as preferred maximum heights
	Current tall buildings have become a wind tunnel and an eye sore and overshadow pedestrian walkways
	Traffic congestion will get worse
	Environment will suffer greatly
57	Essential services will also be affected
	Single or double storey only near Kingsley Gardens
	Do not want to see any buildings on the north side of Elgar Road TAFE on Victoria Crescent
	Agree that there should be maximum building heights in Precinct F
	Height in F5 should be 20 storeys
	Infrastructure needs to be sufficently wide enough to carry additional traffic
	Must be sufficent parking for residents of new towers
	Must be better and more frequent public transport
	Height restrictions and size of buildings should not be altered in other Built Form precincts
	Submission for 517-521 Station Street, Box Hill
	Supports Council's approach to updating the design and development controls applicable to the Box Hill MAC
	Amendment C175 sets out a positive direction for the future development of the MAC and it establishes an appropriate framework to facilitate the development of the proposed design brief for the site.
	Amendment is only about built form and shows no areas allocated for education/open space or improve east-west and north-south movement
	Sites for education and open space cannot be found on the amendment map
40	Roads are already overloaded
	Close alignment of the proposed high rise buildings and lack of quick accessibility to sites could lead to potential problems in a crisis
	Amendment lacks any knowledge of the current problems, including traffic congestion and water pressure
	Built form amendment fails the practical and social needs of the future and current communities
	F1, F4 and F5 should have no height limits, however this should be applied with consideration of the impact on wind and light to the surroundings
	In all precincts residential accomodation should include a wide range of dwelling types to enhance community diversity and include design standards for a significant proportion of dwellings to enable older residents to age in place

42	Will wind modelling be done before developments are given approval? Setbacks need to ensure pedestrians do not feel overwhelmed, and should be setback from the 3/4 storey Wide footpaths, treed avenues and seperated bike lanes need to be integrated into the development of C175 No east-west or north-south bike riding route through Box Hill central or the transport hub Not possible to ride to Aqualink from the north How can we get people out of cars and using active transport?
43	Object to the way Council is progressing the proliferation of high rise building in a suburban environment Shopping centre and station is Asian ghetto Previous ward councillors didn't answer questions about voting on the new high rise building applications and residents were never consulted Council wants to extend the northern boundary past the hospital to another further residential block to Severn Street, therefore assume that extension will continue Council should hold a referendum about high rise in Box Hill Council needs to develop an easily understood planning document about what is planned for the future Maintain 2 storey maximum number of houses to built on existing residential sites, pushing for 1 storey Have a maxium coverage rule, 60% buildings Have a rule that all vehicles should be garaged or parked on site Any high rises have room measurements to stop small room developments Any high rise building must have adequate car parking, 2 spots for each dwelling New buildings limited to 2 storeys in existing residential areas All councillors and council employees must declare any interest in any development taking place in Whitehorse. If they do they must stand aside, resign and be removed from any votir
44	Invited by Councillors to nominate preferred height limits for towers Absence of coherent rationale for the scales proposed and therefore impossible to respond to the document Council should provide residents with a concise and coherent account of its reasoning Council has not had detailed discussion about the consequences in terms of traffic, overshadowing, pedestrian amenity, transport availability, wind effects, water run off and impact of a No estimate of expected daytime and nightime population under projected height limits Already developments approved exceeding preferred height limits Traffic and congestion has reached saturation point Councilors engaged in tokenisic attempt to consult residents
45	Strongly oppose the height limits outlined as it will destroy the amenity of the area Regularly read the local paper/council publications however only found out about this through local councillors Council has been trying to hide the plans as there have been no articles in the local paper/council publications Council should hold a referendum about heights None of the other MACs have allowed the same pace and scale occuring in Box Hill What are the motives of Council, Box Hill should not have take more people Box Hill interchange cannot cope with current population Box Hill does not need high rise buildings, they should be restricted to the capital city Huge, ugly towers will create traffc chaos and there will be a need to upgrade infrastructure Developers must be made to contribute significantly to the cost of infrastructure that will be required F1: 10 storeys, F2/F3: 5 storeys, F4: 10 storeys, 4 storeys west of Elgar Road, F5: 10 storeys, F6: 4 storeys, F7:3 storeys, F8: 5 storeys but 2 storeys along Irving Avenue, F9: 4 storeys
46	Object to the proposed new height limits of 8 storeys around the Kingsley Gardens. Suggest height limit of 3 storeys or the existing height of TAFE buildings west of Elgar Road Encroachment of tall buildings outside the central precinct will decrease the ambience of the suburban area, therefore encroaching on the values of surrounding properties
47	Council applied heritage overlay, extremely dissapointed about changes in neighbourhood Box Hill Police station at rear of property creates noise, overshadowing and overlooking of property Rezoning of the block and southern neighbours to RGZ creating the likelihood of high density, large development to the south Neighbours second floor extension casts a shadow on backyard in winter Dominos Pizza outlet to the north of property is noisy, damages fence and has over flowing rubbish The amendment will mean the house is bordered by large bulk developments
48	Since first submission, received a further letter and coloured sheet requesting comments about heights Very unhelpful, and detrimental, to focus on building heights alone Built form guidelines should deal with, and balance, all aspects of buildings. Building shape, setbacks and overshadowing controls have more productive application than height

oting on planning issues

of aesthetic appreciation of nearby residential areas

reys but 2 storeys abutting residential areas

	Support the general intent of the Guidelines, but believe it is too late as VCAT believes that approved towers set benchmark for height Massive buildings detract from the suburban nature of Box Hill and create many new problems, especially in relation to infrastructure such as transport
	All buildings should have minimum setback at the street frontage
49	Long range view and vista to Dandenong Ranges is a myth
	Built form defines an area, but the use is also important
	Shops along Station Street betwen railway line and Whitehorse Road looks like an Asian ghetto
	Enormous and extended areas of Built Form Precinct F is alarming
	Where is the state government investment in the current plans, including expansion and upgrading of infrastruture and utilities, roads and circulation, school and kindergarten and the t
	Lack of results from Council advocating to upgrade the interchange is ominous
	Proposed spread of massive built structures will dominate, dwarf and shade the immediate neighbourhood
50	Traffic congestion is already a problem
50	Key open spaces are totally inadequate and there must be more mandated green space
	No clear provision for linked bicycle and pedestrian movement
	Absence of transitional building scale zones in several areas
	Lack of obvious committment or requirement for housing diversity, affordable housing or social housing
	Potential for creep into adjoining areas
	Submission on behalf of Blackburn Village Residents Group
	Interface with residential areas outside the city needs careful management
	Prefer allowable heights to be lower particularly near the interface and open space
	If heights are to remain as recommended then setbacks should be applied at street and upper levels
	Amendment and proposed DDO do not demonstrate progressive design
5 4	Concerns about how the future amenity and permeability of Box Hill will be maintained and enchanced
51	Street walls should be set further back to contribute to landscape planting
	No justification for 100% site coverage, space should be provided as setback or private open space
	Planning amendment should be recognise the value of generous footpath widths, landscaping and street level open spaces Tall well designed buildings should return public and private open space to the city centre as a trade off for height
	Sustainability only refers to the existing Structure Plan which is light on
	Scant reference to meeting the present or future cycling needs of community including dedicated cycle lanes
	No reference to cycling nor street design that envisages a cycling network
	New buildings need to be designed to minimise wind at street level
	Traffic is already bad and will become worse
	New buildings should only be 10 storeys high, with a preference for 5-8 storeys
52	Taller buildings should have upper storeys stepped back
	Current buildings have highly reflective surface which creates a hazard for motorists
	Poor TV reception as a result of the current tall buildings
	Concerned that the proposed building heights in the vicinity of Box Hill mall will result in overshadowing of the mall
	The changes do not address any housing shortage but provide opportunity for developers to produce an oversupply of overpriced and poor quality apartments. If Amendment is to add
	to be far more prescriptive in determining a minimum percentage of low cost housing in each development
	Proposed major development area is too vast and the proposed heights are too great
	20-30 storeys should be restricted to a smaller area south of Whitehorse Road
	Rest of major development area should have a reduced limit of 8-10 storeys with 1-2 storeys adjacent to residential areas and open spaces
	This would ensure overshadowing, overlooking and wind tunnels could be better managed
	Introduction of a large number of buildings in small location will place a burden on existing infrastructure, such as stormwater, sewer, gas, water and power supplies. Any upgrades sho
	New multi level developments should not be depedent on Council waste collections but have off street collection with private waste management plans
53	Insufficent car parking - developments must consider the provision of adequate car parking
	Public parking must remain affordable
	Influx in dwellings will cause a change in the traffic patterns, before current proposal is accepted a comprehensive traffic management plan should be produced
	Amendment remains silent on the protection of existing buildings, particularly those of heritage or local significance
	Little provision for the protection of existing open spaces and the introduction of new open spaces Better protection from over shadowing and wind tunnelling must be provided
	More consideration needs to be given to the public transport precinct, and developers should be made to contribute to the upgrading this hub
	Provision should be made for educating the younger residents and land should be identified now
1	No confidence to existing residents that development will not encroach on existing residential areas
= 4	Concern about the way Box Hill is heading with regard to high rise apartment blocks
54	Please reject applications to retain the character of the city
-	

e tired public transport interchange ddress the shortage of affordable housing it will need should be borne by the developers

	Welcome the concept of the Box Hill MAC
į	Amendment does not given consideration to how road and public transport can be enhanced
55 /	Amendment must demonstrate how public transport can be developed and enhanced
, , , , , , , , , , , , , , , , , , ,	Amendment needs to make explicity provision for cyclists and pedestrians
1	Amendment must include provisions of setbacks from building line, particularly for those buildings greater than 20 storeys
ſ	Submission for 902-911 Whitehorse Road, Box Hill
1	Supports the overall direction of the guidelines
	Adjust maximum height of F4 as it is the most suitabel to eb the area with the highest built form
1	This will mean the greatest number of people in the community will be close to public amenities
1	The site should be identified as the most significant location and it has the potential to become a new landmark
	Focus of community activities located at subject site, demonstrates acknowledge of soft core
56 I	Flexible and more adaptive building setbacks should be introduced as the current setbacks are onerous
1	Current setbacsks will likely result in an undesirable style and can stifly innovative architectural design
ļ	A gradual increase of setbacks can be encouraged
ļ	A negotiable and more practical overshadow policy should be introduced
ļ	A reasonable building setback should be able to be negotiated with positive contributuon to the community, including provision of amenities and activation of street level
ſ	Overall, suggest a removal of standard building height, setbacks and shadow restrictions on the site and other socially important locations
I	Land should be encouraged to contibute to the community, including creation of community hub, provision of community facilities and improvement of urban landscape
	F1: 3-4 storeys as concern that it will become a wind tunnel
57 I	F5: 10 storeys as it will create a canyon if higher
/	Developers could be required to provide more greenery
1	The proposed guidelines do not go far enough in protecting the amenity of the local area
	Proposed changes to the density and height of buildings should not occur at the expense of existing public spaces
	Particular issues include significant overshadowing, significant impairement of views, glare from reflected light from buildings, domination of the green spaces and demand on limited public space
	Proposed guidelines reduce street setbacks and this will increase hard surfaces, run off, and temperatures
	Development should provide substantial areas of green space
	Provide designs that provide clear evidence of planning for environmentally sustainable dwellings
	Maintain existing or increased setbacks to enable green space
	Already substantial increased pressure on local streets
	Existing public transport is already outdated
	Council needs to achieve a substantial upgarde in public transport by the State Government
	Developers need to be reuquired to make substantial financial contribution to the local government to offset the demands placed on the community by their developments
	Object to parts of the draft that relate to Poplar Street
	Not opposed to change in zoning, opposing rezoning if it is used to support gluttony of high density apartments
	Object to proposed height limits, a maximum of 5 storeys should be on Poplar Street
	There are already parking isues and an overflow from surrounding uses
	Traffic movement is also an issue and this will get worse
	Construction of high density developments is causing overshadowing and loss of natural light
	Concerns about personal safety and wind tunnel
	Would be directly affected by proposed heights and argue that the height restrictions are too high
	Development to the heights contained in the amendment close to Churchill Street will completely negate the aim of the heritage overlay
	F5: 30 storeys is a least 10 storeys too high
	F4: 20 storeys is too high adn should be reduced by 10 storeys. Part of the precinct bordering Elgar Road should be 5 storeys
	Height restrictions in all precincts will cause an enormous increase in traffic, safety issues and pollution concerns
	Would like all height restrictions reduced considerably
	Environment is being heavily impacted because of the intrusion of the unabated development and destruction of older style homes
	Parking is already at a premium in several areas of Box Hill including shopping centre, railway stations
	Congestion has flow on effects caused along the local streets from the increased traffic
	Councils or developers need to more parking options
<u>n</u> 1	Need to improve bus and train connections and tram priority
	Where is the climate change plan? None of the tower blocks seem to have any setback or green space
	Towers cause reflection, noise pollution, lights and wind tunnels
	Trees are allowed to be cut down and roads are damaged by trucks
	Damage to storm water covers, pollution from traffic idling, footpaths are cracked, rubbish is allowed to accumulate Council needs to improve infrastructure and traffic flow on roads, ensure there is green space and ensure residents local areas are maintained
P	

62	Too many high rises constructions diminishing character Cluttered car parking causing traffic congestion and lack of car parking Community infrastructure has been ignored - not enough carparking and transport hub needs upgrading High rise buildings moving further into residential areas 10 storeys or more should be setback from the street to allow for garden, trees and art pieces Units going up beyond CBD appear to have no regulations as to design or colour and no restrictions on washing being visible from the street High rise causes concern over TV and wifi connections being blocked Views of Dandenongs being obscured
63	Submission for Box Hill Centro he Guidelines and DDO has the potential to negatively impact assets and their development potential Preferred heights for F2 and F4 doe not respond to the opportunity of the MAC nor do they reflect the context of established and improved developments Greater height can be considered without off side amenity impacts Rationale for heights is unclear in documentation Request Guidelines and DDO be updated to reflect both north and south shopping centre sites be reflected as Strategic Development sites as they are currently in different sub prec No guidance on what constitutes a positive contribution Surety is required around the plot ratio concept Degree of flexibility should be retained for setbacks to allow for different design outcomes, they could be referenced as preferred Overshadowing requirements is different between Structure Plan and Guidelines Overshadowing requirements are not clear for Carrington Road Application of the Better Apartment standards and their requirements is more useful than requirements that are open to interpretation, such as "to Council satisfaction" for cross vent Request that Council amend the documentation to reflect the ownership of the centre and their names - Box Hill Central (North) and Box Hill Central (South).
64	Documents contain language which is meaningless and daunting, need a glossary to explain the terms to interpret the document Heritage precinct needs major enhancement to enable it to be more prominent, remove business signage Box Hill identity and culture confused by demographic changes Suggest open spaces with different horticultural styles to embrace changes Has a feasibility study been completed on new jobs that will emerge in Box Hill? Has population projections been completed that identify people wanting the type of housing proposed? Cannot see how vistas and sight lines will be preserved Who was responsible for approving a sprawl of opportunistic developments? Where is the discussion of the residents experience living in the buildings proposed with the hard environment and overshadowing and blocking of views? Lack of open space in plan Concern about the impact of the high use of air conditioning that will be needed and effect on climate change Concern about the amount of water required for new buildings How will existing soft and hard infrastructure cope with increased demand? Concern about impact on traffic and lack of parking spaces Concern about impact on traffic and lack of parking spaces Concern about reduced setback requirements Guidelines bring oppressive buildings, diminishing sunlight and glare
65	Submission for St Paul's Lutheran Church at 709-713 Station Street, Box Hill Generally supportive of the proposed amendment and Built Form Guidelines Request that Council reviews the content of DDO-Table 4-sub-precinct F2 guidelines - Station Street in the "Street Walls and preferred maxium heights" section under "Built Form Repoint that refers to "subject to a sepearate design brief for built for and urban design". This refers to properts over 1,500sqm but should only refer to 519-521 Station Street in the 7th dot point See no need to apply a requirement for a separate design brief for built form and urban design though feel that the site should be given the same opporunities for development as 51
66	Writing in response to the have your say on height limits leaflet Surprised and alarmed that Council has not done more to advertise the opportunity to comment about the height of buildings in Box Hill Horrified to see development over recent years which has happened without consultation or residents approval. Residents in Mont Albert, Surrey Hills and Box Hill feel amenity has I View of hills is obliterated by high rise, no longer shop in Box Hill as there is no parking Poorly designed high rise bedside apartments, exemptions from parking Like to seee lower height limits across the whole area, 6 storeys should be the maximum Schools are already at capacity Where is the green space?

cincts which could constrain outcomes

tilation

Response" and remove wording under the 5th dot

19-521 Station Street

been sacrified for money for City of Nunawading

_		
	67	High towers are too tall, unattrative and totally changes streetscapes Do not promote a neighbourhood, community feeling Overshadowing will occur, Wind tunnel is already there Not enough car parking spaces already Dreadful appearance of rubbish bins everywhere as each apartment will have its own bin and high rise creates more landfill Fewer open spaces for people's wellbeing and relaxation There is not enough infrastructure at present to cope with the area, including public transport and schools Residents are concerned that development is crossing Elgar Road into F9, and want gurantee that no high rise will be built west of Elgar Road
	68	Submission for 13 Prospect Street, Box Hill and 31-35 Prospect Street, Box Hill Does not support the proposed preferred maximum height for F4 as it is inappropriate and will detrimentally impact the development of the land in the precinct The properties on the souther side of Prospect Street are capable of building heights above 20 storeys because: they are idenfied as being medium, large or extra large sites and having large or extra large frontages. they are seperated from the residential properties to the south by the train line and this seperation will be further exaggerated by the requirement in the guidelines for buildings to be si the proeprties on the northern side of Prospect Street are identified as being medium sites however are included in F5 and have a maximum height of 30 storeys the height of any development on the southern side of Prospect Street will be informed and constrained by the overshadowing provisions in DDO6 Therefore the preferred maximum height of properties on the southern side of Prospect Street should be removed or the properties should be included in F5 The reference to heights should be in metres to avoid confusion between retail/commercial developments and residential developments having different floor to ceiling heights The introduction of the built form controls will create a disconnected, inconsistent streetscape, contrary to the objectives of the Guidelines, particularly as there are existing approvals fo have a street wall The proposed minimum setback from site boundaries will create a wedding cake approach and stifle innovative and site responsive design Clarification is required as to whether the 30 degree setback profile for buildings above 15 storeys is required for properties separated by the train line from residential uses in Built Forr The reference to a 1.5 m setback from a laneway for vehicle access should be removed for clarity as there is no reference to the requirement in the guidelines
	69	Support the Amendment Suggest rezoning Built Form Precinct B to MUZ
	70	Object to the proposed amendment F9: 4 storeys as 8 storeys will significantly change the current landscape character and impact on privacy of existing residents Like clarification about whether student housing will be constructed in F9 as it is unwelcome as it is often cheaply made, unattractive, poorly maintained with very little parking Need to mandate much higher levels of off street parking for all developments High density means more street congestion
	71	Submission for 34-36 Prospect Street, Box Hill Guidelines and height limit supported Objects to several specific built form requirements: Setbacks in table 7 are considered excessive and will limit development, should be removed and replaced with a performance based approach to building seperation contained within the Objects to the proposed prefered minimum front setback in table 7 and the identification of a defined physical setback as this can be achieved by various ways and with lesser setbacks Seeks deletion of policy relating to overshadowing of Built Form Precinct A and residential land and open space as this should be on a case by case basis, as there is no analysis of the Protection of front gardens and balconies does not provide for occupier amenity and is inappropriate where it affects the development potential in a MAC Policy guidelin about widening laneways should be deleted or clarified as to what laneways it applies to as it has not been demonstrated that widening of Fairbank Lane is required Matters covered by the Better Apartment Design Guidelines, such as internal amenity, cross ventaliation, borrowed light, building adapability and lightwells, should not be replicated by
	72	Submission for Box Hill institute Objects to several of the specific built form requirements: F6: Discretionary height limit should be increased to accord with the strategic direction gor a higher density outcome Site coverage, setback and building separation requirements is inconsistent with development within this precinct, where commercial and institutional buildings are built for boundary ar Campus style is a vague term and needs to be clarified F9: Setbacks and site coverage may be inconsistent with existing built form pattern Precinct E: Not clear if controls within DDO6 apply to Precinct E when looking at Maps 1 and 2 - would be better for both maps to be consolidated to eliminate confusion over the applic requirements apply

sited close to the street frontage for developments in Prospect Street that do not orm precinct A the Better Apartment Design Standards cks the built form impacts of the shadowing controls by the Guidelines and frontages

lication of the DDO and where sub preinct built form

73	Submission for Epworth Eastern Supportive of proposed rezoning The proposed guidelines do not recognise and support the need for employment related uses, particular health services, vision of Structure Plan has not be reflected No justification for low density campus style built form typology Built form restrictions do not respond to specific requirements for hospital and health care development Site coverage requirements are extremely low and does not allow sufficient development opportunities Site coverage requirements are uncharacteristic for the area and do not reflect the existing character of the area Site coverage requirements do not support the funcationalities required for enhancing the health and education precinct Landscaping setback is not characteristic of the area Building separation are not useful in the context of health projects which requires connections between buildings Delete the objective for taller forms with smaller footprints and generous separation as this constrains interconnecting buildings in a hospital setting Revise the site coverage to 80% to allow for efficient and functional hospital floorplates, would still allow for open space and setbacks Requirement for 10m building separation to apply to residential development only Remove or reduce landscaping buffer from 8 to 6m as it impedes the use of land for hospital use Crossovers and drop off areas should be able to be included within landscaped areas
74	Submission for 535 Station Street, Box Hill Supports discretionary built form controls Council may consider incorporating performance criteria that demonstrates a public benefit Preferred maximum height is inappropriate and additional height could be accomodated if sites are consolidated Building height guideline should be rephrased to be 15 storeys where it can be demonstrated that site characteristics and location do not negatively impact on the area. 20-25 storeys Building height should be demonstrated by design response not solely by the site size and therefore maxium height above 15 storeys on sites greater than 1500sqm should be remov Side and rear setback requirements is inappropriate for residential development but could apply to commercial office developments Setbacks above 10-15 storeys shold be subject to amenity implications and if it can be demonstrated there are no negative impacts, then setbacks should not be a requirement
75	Submission for 702-706 Station Street, Box Hill Supports discretionary built form controls Council may consider incorporating performance criteria that demonstrates a public benefit Street wall guideline should be rephrased to read "street wall should be responsive to site context and not exceed 5 storeys" Preferred maximum height proposed is inappropraite and should be rephrased to be 15 storeys where it can be demonstrated that site characteristics and location do not negatively in Building height should be demonstrated by design response not solely by the site size and this guideline should be removed Side and rear setback requirements is inappropriate for residential development but could apply to commercial office developments Setbacks above 10-15 storeys shold be subject to amenity implications and if it can be demonstrated there are no negative impacts, then setbacks should not be a requirement Site responsive approach to built form based on ameity outcomes is appropriate
76	Submission for 436 Elgar Road, Box Hill Supports discretionary built form controls Council may consider incorporating performance criteria that demonstrates a public benefit Rephrase guideline about street wall to read "street wall height to achieve a preferred 1:1 ratio, or a 5 storey street wall where the height does not exceed the 1:1 ratio" Rephrase guideline about setback above podium to read "preferred minimim setback of 5m above podium to all site boundaries" reduced setback may be appropriate where it can be do not negatively impact on the amenity of surrounding area Rephrase guideline about building height to include reference that higher built form may be appropriate if it can be demonstrated that site characteristics and location do not negativel 30 degrees angled setback profile should be removed as this control is more appropriately regulated by over shadowing guidelines Minimum setback requirement above 6-20 storeys would be redudant if previous setback above podium is rephrased Site responsive approach to built form is more appropriate
77	Submission for 28 Main Street, Box Hill Supports discretionary built form controls Council may consider incorporating performance criteria that demonstrates a public benefit Rephrase guideline about building height to include reference that higher built form may be appropriate if it can be demonstrated that site characteristics and location do not negativel Rephrase guideline about minimum 10 m setback to read "preferred minimum setback of 10 metres above the street wall for additional levels" No guideline as to the preferred street wall height at the Main Street frontage, suggest a 4 storey street wall is appropriate as it would create a 1:1 street wall width ratio

s should be contemplated on larger sites ved

impact on the area.

e demonstrated that site characteristics and location ely impact the amenity of the surrounding area

ely impact the amenity of the surrounding area

7	Submission for 18-20 Prospect Street, Box Hill Supports discretionary built form controls Council may consider incorporating performance criteria that demonstrates a public benefit Rephrase guideline about street wall to read "street wall height to achieve a preferred 1:1 ratio, or a 5 storey street wall where the height does not exceed the 1:1 ratio" Rephrase guideline about building height to include reference that higher built form may be appropriate if it can be demonstrated that site characteristics and location do not negative Rephrase guideline about minimum setback above podium to read "preferred minimum setback of 5m above the podium on all sides" Setback above podium will be redundant if above guideline is altered Setback from side and rear about 6-20 storeys will be redundant if above guideline is altered Rephrase no setback from side and rear up to 5 storeys to read "no setback from side and rear boundaries at podium levels" Setbacks above 21-30 storeys should be subject to amenity implication - if it can be demonstrated that there are no negative amenity impacts then setbacks should not be a requirem
7	Submission for 26-28 Prospect Street, Box Hill Supports discretionary built form controls Council may consider incorporating performance criteria that demonstrates a public benefit Rephrase guideline about street wall to read "street wall height to achieve a preferred 1:1 ratio, or a 5 storey street wall where the height does not exceed the 1:1 ratio" Rephrase guideline about building height to include reference that higher built form may be appropriate if it can be demonstrated that site characteristics and location do not negative Rephrase guideline about building height to include reference that higher built form may be appropriate if it can be demonstrated that site characteristics and location do not negative Rephrase guideline about minimum setback above podium to read "preferred minimum setback of 5m above the podium on all sides" Setback above podium will be redundant if above guideline is altered Setback from side and rear about 6-20 storeys will be redundant if above guideline is altered Rephrase no setback from side and rear up to 5 storeys to read "no setback from side and rear boundaries at podium levels" Setbacks above 21-30 storeys should be subject to amenity implication - if it can be demonstrated that there are no negative amenity impacts then setbacks should not be a requirem
8	Submission for Epworth Eastern The proposed guidelines do not recognise and support the need for employment related uses, particular health services No justification for low density campus style built form typology Site coverage requirements are extremely low where almost all other precincts are 100% Site coverage requirements are uncharacteristic for the area and do not reflect the existing character of the area Site coverage requirements do not support the funcationalities required for enhancing the health and education precinct Council should consider more urban-centric campus developments Landscaping setback is not characteristic of the area Building separation are not useful in the context of health projects which requires connections between buildings Delete the objective for taller forms with smaller footprints and generous separation as this constrains interconnecting buildings in a hospital setting Revise the site coverage to 80% to allow for efficient and functional hospital floorplates, would still allow for open space and setbacks Requirement for 10m building separation to apply to residential development only Remove or reduce landscaping buffer from 8 to 6m as it impedes the use of land for hospital use Crossovers and drop off areas should be able to be included within landscaped areas
8	Submission for 813-823 Whitehorse Road, Mont Albert Development of 15 storeys on the site would provide a more appropriate outcome as: taller buildings would create a gateway site and entrance to the MAC taller buildings would provide a smoother transition between 30 storeys in F5 and 4 storeys in the RGZ surrounding buildings would be protected by overshadowing provisions Front setback requirements will unreasonably reduce development on site and has been inappropriately applied considering context and zone Setbacks and site coverage requirements inconsistent with zone Should be greater discretion to vary setbacks between buildings Site should be included in F4 which will allow for greater height, 100% site coverage to facilitate active frontage and canopy and will facilitate appropriate built form separation to achi objectives
8	Submission for 942-946 Whitehorse Road, Box Hill Support for built form guidelines as they relate to about site

ly impact the amenity of the surrounding area nent of the building design ely impact the amenity of the surrounding area ment of the building design ieve amenity, equitable development and visual

 Commentary about rationate for proposed oblicitions, including scale and intensity of development Who are towers being built for and how are they contributing to the objectives of Plan Melbourne? With a glut of high rise apartments looming in the CBD and high vacancy rates, such investment may not provide more diverse and increase hosuing options Will the proposed density and form of the proposed developments result in an urban form which meets the key principles articulated in Plan Melbourne? Current planning frameworks lawhich are articulated in the most recent refresh There is already a significant infrastructure deficit in Box Hill which is increasing traffic congestion, car parking issues, difficulty in accessing the centre, transport capacity issues in the ir Pedestrian and bike access difficult, limited protection for heritage built form Nature of private investment raises issues about lack of cultural and racial inclusiveness in the recent development Raises questions about the extent to which the form of urban development is consistent with a diverse cosmopolitan urban centre which is accessible to different demographics, inclusiv traditions How will Box Hill meet the broader requirements for an inclusive and diverse offering of cultural, housing and employment Current infrastructure risks being dwarfed by scale and density of the tower development, proposed removal of heritage proection from original buldings along Whitehorse Road is not su Guidelines have removed height limits from part of the heritage precinct and no rationale has been provided for this Need more careful consideration of the capacity and potential of the former heart of the Box Hill centre Retail centre is struggling under weight of traffic congestion No additional or improved provision of open space High rise apartment towers which are built to solicit investor inte

I All the birth rise planned and prepaged development is leasted well suitaide the beart of the president on its western beyondom.
All the high rise planned and proposed development is located well outside the heart of the precinct on its western boundary
F1: Proposed height will destroy the scale and sense of place
F2: Podium setbacks do not constitute a pedestrian friendly environment and this may create wind and light access issues
5m setback should be instituted for all development along this street
No landscaping is made for private properties
No provision for car parking is to be made
Street to wall frontage is unacceptable
How will interfaces be managed?
F3: 4 storey street walls unacceptable, no side and rear setbacks will create amenity impacts and proposed height will change intent of the precinct as per the Structure Plan Access to key open spaces is neglible
F4: No design rationale for height limit, what will be the composition of the developments? F5: 30 storeys is strongly rejected
Support with intention to create a conce of place. Support walking objective in Section 22.07.2, but footpaths need to be widened where possible
Mandate a front setback of at least 0.5m to allow for better pedestrian access
Support cycling objective, but more bicycle parking facilities are needed in narrow streets or in front of buildings, not just in underground car parks
Support intention of Section 22.07.3 around Built Form, but wording needs tightening to include stronger language than encourage
84 Mandatory heights should be sought, otherwise heights should be reduced to allow for extra levels that will be sought at VCAT
Height in F1 should be 6 storeys, but prefer 4 storeys to ensure pedestrian ares are not permanently shaded and the effects of wind tunnels be avoided
Support environmental impact statement with emphasis on larger developments generating renewable energy where possible
Lot consolidation wording needs to be stronger in traditional precinct
Area between Harrow Street and Ellingworth Parade is shown as key open space link, however it is a car park
Pioneer Park at the corner of Harrow Street and Station Street is not shown on map - both of these need to be updated
Submission for 874-878 Whitehorse Road, Box Hill
Supportive of discretionary, performance based controls
85 Supportive of intent of Guidelines but feel that they do not provide sufficient flexibility to respond to constraints on individual sites
⁸⁵ Further guidance should be provided to identify circumstances where variation to height and setbacks could be acceptable
Consider strict adherence to side and rear setbacks would unreasonably stifle development opportunities
Submit that Clause 2.0 of the proposed DDO be amended to identify a wider range of performance based considerations to respond to unique constraints and opportunities for each site

lack key elements of the requirements for the MAC e interchange and shortage of public open space.

site

86	Submission on behalf of Box Hill Historical Society Height limit in traditional town centre is not supported as it is a substantial and excessive increase to the current situation Potential overshadowing, wind concentration and lack of direct sunlight will impact significantly on public space F2 and F4: 1-2 storey street wall with 4 storey height limit to protect pedestrian and public amenity Amenity of Whitehorse Road median strip needs to be preserved and not overshadowed F4 between Shipley and Bruce Streets should be 6 storeys with 1-2 storey street wall F3 between Station Street and Court Street should have same height as F4 above Recommend that height limits be mandatory Recommend that former Post Office and Payne and Boyland building be given heritage protection and latter also considered a contributory building
87	F2/F6/F8/F9: Boundary with Box Hill/Kingsley Gardens should be no more than 5 storeys, F5: 20 storeys Insufficient open space for potential new reisdents, small scale open spaces should be provided for workers and residents close to Whitehorse Road Developer contributions should be used in Box Hill to compensate existing residents and provide for new residents Object to lack of setback provided by new buildings F3/F4/F5/F8: Setback to building frontage should be proivided to allow for public amenity along streets Concerned about potential for increased traffic congestion in Whitehorse Road and main north-south roads Will other existing infrastructure be sufficient? Developers should be required to contribute to upgrade of services Guideline about awnings should be atlered to require continuous awnings
88	Object to the proposal because it does not consider the impacts of high rise buildings Increased local and surrounding traffic and the situation will get worse if the number of storeys is increased Facing issues like noise, road safety, emissions and parking Proposed new scheme will push us out of the area Creation of wind tunnels, the number of storeys needs to be halved in each precinct
89	Submission for 6-10 Shipley Street, Box Hill Amendment should be varied having regard to the preferred height for the site and precinct on the basis that the site can accommodate a taller building without unreasonable offsite and site where higher scale development might be contemplated, as it was is proposed is too low because: the site area and proportions of the land which could accomodate increased building heights orientation of the ladn and dual street frontages would assist in mitigating any offsite amenity implications proximity to PPTN and access to education and health facilities/shops/services and areas of public open space Similiar development opportunity warranted to 20 storey permit at 12-14 Nelson Road If higher heights not accepted then request being nominated as a strategic development site
90	Do not support amendment and it should be deferred Guidelines do not proivde any proposals that could implement strategies around accessibility, amenity, sustainable transport, walking and cycling Should not be implemented until adequate analysis has been done to address hard infrastructure issues such as traffic, public transport and cycling and walking infrastructure The Guidelines will lead to a significant increase in mass of built form in Box Hill The Guidelines little analysis to support specific height proposals No information in Guidelines on project population figures that might result in implementation of Guidelines
91	Unhappy about new towers being built in Box Hill, grow higher every day and intrude into quiet, leafy neighbourhood Box Hill will become an ugly concrete jungle Towers bring appalling congestion, traffic jams, vehicle exhaust fumes, lack of parking, pedestrian congestion, crowded trains and trams Request at least halve the proposed height limits Should require developers to allow generous space for trees, landscaping, road widening and bike paths
92	Submission on behalf of Whitehorse Active Transport Action Group Inc Initiative may be too late in balancing current large scale development with the need to meet the Victorian Planning objectives Guidelines pay scant attention to catering for new residents/workers/hotel guests whether it be services like active transport infrastructure, sewerage, storm water run off, flood mitigation facilities and passive open space areas Existing public transport and roads are inadequate to cope with increase Fear that a modern day slum will be inevitable result Amendment will have a significant effect on the Box Hill transport system Council is abrogating its responsibility to advocate for a complete overhaul of the existing public transport system Transport chaos will result if the current rail, tram, vehicular, pedestrian, cycling and active transport infrastructure is not reviewed and improved Guidelines dont discuss pedestrians and cycling, need to consider infrastructure such as active transport underpasses/overpasses for major roads/railway line, traffic calming, shared p suitable front setbacks, education campaigns etc Amount and quality of open space currently available for active and passive transport recreational activities fall well short of the amount required Council should purchase and ameliorate Federation Street brickworks for public parkland Guidelines make no mention of a number of existing strategy and policy documents that are directly relevant

m other backgrounds find it hard to relate to the

lity local environment wiith the appropriate

ation, schools/kinder, medical, active sporting

	Amend height limits
97	Consult on population versus services
•••	Maintain the integrity of the area
	Quality of life is not first priority
	Unhappy about new towers being built in Box Hill
98	Direct impact on the quiet, leafy suburbs of Mont Albert which is a heritage protected area
	Request at least halve the proposed height limits
	Should require developers to allow generous space for trees, landscaping, road widening and bike paths
	Do not support the amendment
99	Built form precinct plan promoting development into standard residential zones is very aggreessive Amendment does not flag any new parks, education facilities, and public amenity
99	Built Form Precinct A and B should be removed and more half the heights proposed in Precinct F
	Benefits are clearly limited to foreign investors, those in construction and Council as leaving no parameters in Precinct F
	Keep current height limits in F9
100	There will be an increase in the demand for supporting services and facilities, especially primary school
	It will impact the holistic nature view of Mont Albert
	Object to all proposed height limits
	Plan Melbourne identifys as an Activity Centre, but in the main it is a Health and Education Precinct
	Residents bear the brunt of high rise buildings that are largely unattractive and many have balconies displaying mattresses and other household furniture
	Parking and traffic study is now obsolete, lack of car parking and more vehicle congestion
101	Structure Plan talks about transitional building heights from Box Hill to surrounding residential area but having 30 storeys does not allow for this
	Box Hill is intended as a MAC not CBD, and infrastructure already needed an update prior to current construction
	Streets in the MAC and surrounding area can not accommodate densely built high rise buildings and create wind tunnels
	Lack of setbacks required for towering buildings, together with minimal vegetation requirements makes the urban heat island effect a major concern
	Height amendments should be held in abeyance until approved developments are finalised or height limits should be lowered
	Unhappy about new towers being built in Box Hill, grow higher every day and intrude into quiet, leafy neighbourhood
	Box Hill will become an ugly concrete jungle
102	Towers bring appalling congestion, traffic jams, vehicle exhaust fumes, lack of parking, pedestrian congestion, crowded trains and trams
	Request at least halve the proposed height limits
	Should require developers to allow generous space for trees, landscaping, road widening and bike paths
	Submission for 811 Whitehorse Road, Mont Albert Concerned about restrictive nature of requirements in F9 and believe that it will compromise ability to adequately development land
	Maximum height of 8m will not provide a staggered transition in heights
	Guidelines do not talk into account existing built form and size of site
103	Conflict between requirements in Street Wall and preferred maxium heights which require a minimum 8m landscape setback and in landscape which requires a 5m landscaping setba
105	Difficult to achieve 10 m separation between buildings if the proposed 18 storey building on the adjacent site is approved and constructed
	Not clear what landscaping elements are to be incorporated into the facade
	Suggested a new sub-precipient for 811 and 813 Whitehorse Road, Mont Albert
	Suggested 100% site coverage, 15 storeys, landscape setback of 5m
	Lack of infastructure now causes parking and traffic problems
	How does Council intend to manage the extension of hospital and TAFE services and the parking required?
	Has Council planned for schools/kinders/green fields?
104	Have demographers been involved in the implications of the proposal and impact on associated services?
	F2: height could be 12-15 storeys
	Is there an infrastructure plan to address associated impact on traffic and parking?
	Is there a plan to upgrade the train station and widen adjacent roads?
	Concerned about the height limits, particularly those proposed for F3
	Watts Street is a residential street with family homes
	Live amongst monstosities, rubbish, abandoned trolleys, influx of vermin and crows, which will increase if Council approves further height controls
	Inability for children to safely walk and ride to school by themselves due to traffic
105	Increasing heights in F3 will encroach on the homes, and heritage properties, which are being lost to arpartments
	Raising the height limit in F3, specifically in Watts Street will set an precedent for increasing height limits in residential streets
	Families do not want apartments to live, they want gardens
	The Australian dream is to own a home, not an apartment.
	Vast country, therefore leave suburbs alone

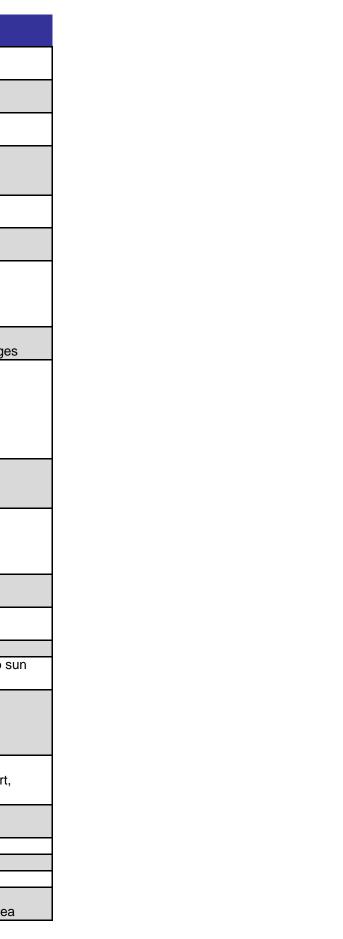

back		

	Precinct F3 is major concern as the proposed 10-12 storeys height is in a surburban backstreet with residential housing
106	Do not want to be shadowed by unsightly tall buildings with wind tunnels
	Council has the opportunity to leave heights as they are and not accept any new height changes
	Unhappy about new towers being built in Box Hill, grow higher every day and intrude into quiet, leafy neighbourhood
	Box Hill will become an ugly concrete jungle
107	Towers bring appalling congestion, traffic jams, vehicle exhaust fumes, lack of parking, pedestrian congestion, crowded trains and trams
	Request at least halve the proposed height limits
	Should require developers to allow generous space for trees, landscaping, road widening and bike paths
	Unhappy about new towers being built in Box Hill, grow higher every day and intrude into quiet, leafy neighbourhood
	Box Hill will become an ugly concrete jungle
108	Towers bring appalling congestion, traffic jams, vehicle exhaust fumes, lack of parking, pedestrian congestion, crowded trains and trams
	Request at least halve the proposed height limits
	Should require developers to allow generous space for trees, landscaping, road widening and bike paths
	Unhappy about new towers being built in Box Hill, grow higher every day and intrude into quiet, leafy neighbourhood
	Box Hill will become an ugly concrete jungle
109	Towers bring appalling congestion, traffic jams, vehicle exhaust fumes, lack of parking, pedestrian congestion, crowded trains and trams
	Request at least halve the proposed height limits
	Should require developers to allow generous space for trees, landscaping, road widening and bike paths
	Unhappy about new towers being built in Box Hill, grow higher every day and intrude into quiet, leafy neighbourhood
	Box Hill will become an ugly concrete jungle
110	Towers bring appalling congestion, traffic jams, vehicle exhaust fumes, lack of parking, pedestrian congestion, crowded trains and trams
	Request at least halve the proposed height limits
	Should require developers to allow generous space for trees, landscaping, road widening and bike paths
	Unhappy about new towers being built in Box Hill, grow higher every day and intrude into quiet, leafy neighbourhood
	Box Hill will become an ugly concrete jungle
111	Towers bring appalling congestion, traffic jams, vehicle exhaust fumes, lack of parking, pedestrian congestion, crowded trains and trams
	Request at least halve the proposed height limits
	Should require developers to allow generous space for trees, landscaping, road widening and bike paths
	Unhappy about new towers being built in Box Hill, grow higher every day and intrude into quiet, leafy neighbourhood
	Box Hill will become an ugly concrete jungle
112	Towers bring appalling congestion, traffic jams, vehicle exhaust fumes, lack of parking, pedestrian congestion, crowded trains and trams
	Request at least halve the proposed height limits
	Should require developers to allow generous space for trees, landscaping, road widening and bike paths
	Unhappy about new towers being built in Box Hill, grow higher every day and intrude into quiet, leafy neighbourhood
	Box Hill will become an ugly concrete jungle
113	Towers bring appalling congestion, traffic jams, vehicle exhaust fumes, lack of parking, pedestrian congestion, crowded trains and trams
	Request at least halve the proposed height limits
	Should require developers to allow generous space for trees, landscaping, road widening and bike paths

		Dissappointed Guidelines don't address problems occuring at periphery of Built Form Precinct A where recommended density and height is not being respected
		Proposed height limits should be mandatory maximums rather than preferred
		Some height limits do not address protecting amenity of key open spaces, access to sunlight, minimising overshadowing and avoiding wind tunnel effects
		Document is silent on wind tunnel effects on pedestrians and outdoor eating areas
		Preferable to further extend the F1 to incorporate both sides of Whitehorse Road, both sides of Market/Main Streets, Station Street to the railway line on the west side, Carrington Road
		would provide better protection for the median and other outdoor areas
		Guidelines do not mention the removal of trees and landscaping and no provision for replacement at street level
		The pedestrian link adjacent to the former PO at 16-18 Nelson Road through the Shipley Street also needs to be recognised
		Where development faces both a street and open space, the private back is more public and needs to be treated differently
	114	Better access needs to be provided for service vehicles and set down areas
	114	Landscape zone mentioned in some of the sub precinct guidelines not identified elsewhere
		F2/F3: Carrington Road less than 6 storeys with 1-2 street wall, elsewhere 10 storeys with 5 storey street wall
		F3: Station Street to Court Street 6 storeys with 1-2 street wall
		F4: Whitehorse Road, Market Street to Clisby Court and Bruce Street to Shipley Street 4 storeys with 1-2 street wall
		F4: Prospect Street opposite Hopetourn Parade 10 storeys
		F5: 20 storeys with setbacks to Whitehorse Road and Elgar Road maintained
		F6: 10 storeys with ground level setbacks
		F7: 10 storeys with ground level setbacks at side and street frontage
		F8: 10 storeys with ground level setbacks front and side, 5m setback Irving Avenue
		F9: 8 storeys with ground level setbacks and separation, articulation of buildings to ensure sunlight acces
		Submission for 722 Station Street, Box Hill
		Land located in Built Form Precinct B
	115	Proposed building height of 3 storeys does not provide an appropriate transition between Precinct B and F2
	110	More appropriate height for Precinct B needs to be considered
		Proposed height does not facilitate built form that reflects the purpose and intent of the MUZ
L		Structure Plan is outdated and does not reflect the current and approved built form character
	116	Owner of 486-488 Elgar Road, Box Hill
	110	Supports the amendment
	117	Concerned about standard of developments
L		Opportunity to build a wonderful place to live, but balance is too heavily in favour of developments

ad from Station Street to the end of the shops. This

										Box Hill CBD looks like a third world country
42	8	10	5	5	5	5	5	5	3	Traffic, parking, streetscape and congestion a nightmare
72	0	10	5	5	5	5	5	5	5	Reduce building height
										Concern about traffic congestion, which will increase with multi-storey
40		4	4							development
43		4	4							Strain on infrastructure
										Parking a problem
								1		The proposal will negatively impact residential homes in terms of light,
	_	_						_		traffic, communication towers.
44	6	4	4	10	10	10	10	5	4	Neighbouring communities need protection from aggressive
										developments
										Towering office blocks, inadequate parking and no green spaces will
										destroy the amenity of Box Hill
45				15	15					Box Hill is not Melbourne CBD and has none of the cultural or other
										aspectst that might attract tourists and provide a lively city feel
										Object due to overshadowing, lack of privacy, wind tunnel, traffic,
46	4	4	4	10	10	4	4	4	4	convestion, lack of parking, noise, balconies full of laundry, interference
		•								with TV reception, infrastructure issues such as rubbish, water pressure
										and potential for flooding
47		8	8		15	10	10			Would like to see descending heights from central point in Box Hill
										More rise means more wind tunnels, less sunlight, more mess being left
48	5	8	8	8	8	8	4	4	4	on nature strips. Far too much washing on tiny balconies gives a real
										slum appearance
10		4		_	-					Box Hill interchange can barely cope with the current passenger levels
49	4	4	4	5	5	4	4	4	4	at Peak hour, proposed buildings will make it impossible for passngers
										Parking and transport issues
			-		-		-			The proposed heights in this area are too high, the transport and roads
50	8	3	3	8	8	8	8	8	8	will not cope
51			8	12						Disappointing that the large towers have been permitted to be built
0.			Ũ	12						Concern about loss of sunlight, provision for cars, bikes and pedestrians
										Do not want the area to become an overcrowded, concrete, box type
52	6	6	4	4	2	3	2	2	6	dwellings, taking away the sunny, leafy, openess
										Box Hill central area is very congested, high rise buildings may help to
50		F	F	7	7	10	-	-	-	
53	5	5	5	7	7	10	7	7	7	revitalise the city, but it may also make it messier, therefore disagree
										with the councils proposal
										All shops and offices shoud have writing and menus in English, all the
										Chinese writing is reverse racism as we don't live in China
54										Don't want overdevelopment, don't want high rise
0.										Leafy, eastern suburbs are being destroyed by poor planning, lack of
										foresight and greed
										How does Council intend to address traffic flow issues?
										Streetscapes and community needs should be consideredmore for
55	0	Λ	4	8	0	0	Λ	4	4	ongoing progress and changes, if not Box Hill will beome an unpleasant
55	8	4	4	ō	8	8	4	4	4	environment for all
1										Traffic and parking through Box Hill needs to be considered
										Greneral concern is in relation to community amenity and the strain on
56		9			20	10		5		infrastructure in the area such as medical centees, schools, power
					_0			Ĭ		supply
										Traffic management, estimated population density, upgrading services,
57	8	15	12	20	30	15	15	10	8	multistorey carpaking and upgraded transport hub
L	1									

58	8	8	8	10	15	10	4	5	5	Very high buildings already causing stress on public roads, Council waste collection. High rise need to blend into residential areas without destroying neighbourhood characteristics
59	5	8			20	8				Unsightly to have such a large area with an uneccessary high height limit
60	6				8	10				Building heights should be stepped drown from Centro to heights no more than 5 stories abutting Churchill Street Heritage precinct
61	4	8	8	12	15	10	6	4	6	Vehemently opposed to the proposed height limits because of traffic congestion, shadow cast by buildings and possibility of buildings bein built over Whitehorse Road.
62	6	6	6	8	8	8	8	8	8	Congestion is already bad and will become worse with more high rise buildings
63	6	6	6	8	8	8	8	8	8	Don't believe that the current building height limit will benefit Box Hill Current traffic in Box Hill is congested and is forcing more traffic down side streets
64	2	2	2	10	10	2	2	2	2	Already have enough development Many problems with high density buildings in the area
65	5	5	5	5	5	5	5	5	5	The Box Hill area is already over developed Traffic and parking will be a nightmare Train and tram services are already overcrowded and will get worse
66	5	5	2	5	8	10	10	10	4	Fears about traffic and parking The plan will create a mini Hong Kong of New York with traffic gridloc and lowering of living standards
67	3	6	8	12	16	8	6	5	2	There is no need to have the heights/storeys of the building in Box Hil at such extreme levels Issues with parking, traffic flow, environmental impacts, overshadowin Box Hill will become Chinese Mecca or Hong Kong/Vietnam/Asia Reading documents a complex process Council should meet with residents
68	6	6	6	10						Want to know about car parking for all residents How can the public find out who the developers are and who the reisdents will be? Residents want a public meeting about this and driving standards in B Hill
69	10	10	10	12	15	10	8	6	4	Why is the CBD restricted to 8 storeys? Strongly object to over development of multi storey buildings within Me Albert boundaries, should be restricted to commercial zoning only with Box Hill limits and not include west side of Elgar Road
70	4	6	6	10	8		8	6	4	Concern about overshadowing, impairment of views, glare from reflected light from buildings, domination of public green spaces, demand on limited public space, increased hard/sealed surfaces, demand on local infrastructure
71	6	6	4	10	10	6	6	8	6	Traffic congestion Limit heights near dwellings Any streets such as Whitehorse Road should not be touched
72	8	8	8	8	8	8	8	6	6	General view from around the suburb should not be obstructed by ugl towers

73	8	8	5	6	10	12	8	4	4	No more than 4 storeys abutting parkland Provide more greenspace Require setbacks for planting Reduce hard surfaces Reduce heights to prevent wind tunnels Require adequate car parking Require adequate laundry and store space to prevent washing on balconies Encourage better design of units Concerned about more pollution, light spill, lack of infrastructure, more
74	8	8	10	15	10	4	4	4	4	traffic jams, lack of parking for cars, more rubbish, less greenery, increased wind velocity
75	5	3	3	5	5	3	3	3	З	Loss of amenity is palpable Box Hill is not a suburb of Hong Kong or Shanghai Object to proliferation of multi storey skyscrapers Traffic and parking is intolerable Box Hill will start to resemble a ghetto Heights should be no more than 5 storeys in each precinct
76										Amenity of Box Hill Open space, car parking, advse impacts during construction
77	6	8	8	18	16	12	10	8	6	Highest heights should be in the centre, the other buildings around must be lower
78	8	8	8	8	8	8	8	8	8	Restrict all heights to nothing over 8 storeys and then only in Box Hill central
79	8	8	8	8	8	8	2	2	2	Box Hill should not be a mini Hong Kong full of skyscapers 8 stories is ampble and will not drastically affect the landscape of Box Hill
80		10				10	6	8	5	Shocked to see the horrors being built on Whitehorse Road
81	4	6	4	8	10	6	4	2	2	High rises look untidy, little often scattered outside, washing on lines, traffic congestion, No buildings over 10 storeys
82	4	3	3	4	4	4	2	4	4	Asians wont make submission. Ghettos are being creaed in Box Hill and Europeans wont live there. The planning and mix of people is terrible
83	3	3	4	4	4	6	6	6	4	Would destroy the main pedestrian thoroughfare The lovely homes make Box Hill a desirable place to live Pulling them down and replacing them with terrible monolithic buildings is an abomination and destroying the character Building will cause nasty wind tunnels around the buildings Who is going to live in the many apartments? Will this become like a deserted city?
84	8		12	12	12	12	12	10	8	Beautiful heritage, and beautiful streets are being destroyed
