Wayfinding Approach

WF Future Wayfinding

↔ Future Wayfinding View Line

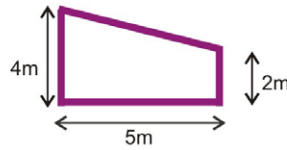

Suggested locations for wayfinding signage elements as part of a larger precinct wayfinding solution (by others) are nominated. These are located at key decision making points along existing and proposed movement network identified within strategic documents covering this site.

The type and signage design is subject to future design work but we recommend that they be integrated as vertical elements within the planters to provide guidance, along with future lighting along the laneway. The positioning of feature tree with elevated canopy and porous wind screen will assist with visibility to guide users along the route.

Windscreen

01 Northwest Safety Screen

Tapered & Porous (50% porosity)

02 Northeast Safety Screen

Tapered & Porous (35% porosity)
